Assessli

A pioneer in creating the Large Behavioral Model (LBM) — a new generation of AI trained on genomic, neuropsychological, and behavioral data. Unlike traditional LLMs, an LBM understands humans more deeply, taking into account behavior, psychology, and decision-making logic, evolving in real time alongside people and transforming education, HR, and healthcare. The LBM-as-a-Service (LBaaS) technology is already available to more than 1 billion users worldwide, making artificial intelligence truly personalized, dynamic, and human-centered.

COMPUTER VISION, DEEPTech, RETAIL Tech

Tass Vision

Video analytics system based on proprietary cameras with edge AI. Unlike traditional solutions that transmit data to the cloud for processing - which is expensive and slow - TASS algorithms run directly on the camera: detection, tracking, and analytics are performed locally. This reduces processing costs by 20 times, accelerates response times, and addresses privacy concerns. The platform is already deployed in retail for heatmaps, visitor analytics, staff tracking, and optimization of merchandising and marketing.

SPACETECH, DEEPTech, ADVANCED MANUFACTURING

Astrophel Aerospace

Startup developing affordable, reusable launch vehicles for small satellites, powered by semi-cryogenic engine technology. To reduce costs, the project leverages 3D printing and modular assembly—approaches borrowed from the automotive industry. The project demonstrates how complex systems can be built without massive budgets through lean engineering.

India

astrophelaerospace.in

SPACETECH, DEEPTech, CLIMATE TECH

Satleo

The project is developing the first satellites with multispectral thermal imaging (MWIR + LWIR + optical) at ≤ 10 m resolution (resampled to 2–3 m), with applications in climate, agriculture, urban planning, and oil & gas. The first CubeSat mission is scheduled for February 2026. In parallel, a Russian analogue of Starlink is being created to provide connectivity without terminals — with direct signal reception on user devices, including mobile 5G. The technology relies on a proprietary full-duplex inter-satellite laser system and high-performance onboard computers. The first two satellites are planned for launch within 14–16 months.

Reme-D

BIOTECH, HEALTHTECH, DEEPTech

Reme-D

A biotechnology startup in molecular diagnostics that develops and manufactures proprietary PCR and molecular test systems based on patented reagent formulas. Unlike traditional imported kits requiring cold chains and lengthy logistics, Reme-D solutions are optimized for regions with limited infrastructure: proprietary patented kits are six times cheaper and delivered within one week instead of several months. The company's portfolio includes over 30 products for the detection of infectious and genetic diseases.

HEALTHTECH, GEN AI, CREATIVETech

FabStory AI

AI-powered application and platform for hyper-realistic modeling of facial and musculoskeletal structures, with real-time speech-to-expression synchronization. The solution is applied in speech therapy and neurorehabilitation for objective diagnostics and patient progress tracking; in dentistry and surgery for precise 3D surgical planning; in neurology for motor function analysis and predictive assessment; as well as in education and public communication for training speech, intonation, and facial expression delivery.

AGTECH, GEN AI, DEEPTech

SciCorp

AI platform for agribusiness that predicts crop yields, optimizes harvesting and logistics, and assesses ESG and credit risks across the supply chain. The system analyzes satellite imagery, weather data, sensor inputs, and market statistics, integrating them with tens of millions of historical records.

Brazil

scicrop.com

CREATIVETech, DEEPTech, GEN AI

Vidu

A next-generation AI video generation platform that builds proprietary models from scratch. The company provides a mobile and web application for content creators and an API platform for businesses, enabling the transformation of images into high-quality videos for e-commerce, marketing, and advertising. Clients include Amazon China and Alibaba.

China

CLOUDWORX

INDUSTRIAL TECH, DEEPTech, IOT

Cloudworx

Developer of the world's first browser-based Process Twin Platform (PTP), combining 3D, IoT, and AI in real time on a patented web framework. The platform transforms CAD/BIM drawings into interactive 3D environments, connects sensors, predictive analytics, and scenario simulations, enabling modeling and optimization of everything from individual assets to entire cities.

India

cloudworx.ai

Ozoned

FINTECH, INSURTECH, SAAS

Ozoned

An insurtech platform covering the entire insurance value chain: from policy sales and management to claims processing, group underwriting, agency networks, brokers, digital wallets, warranty, and embedded programs. Unlike fragmented solutions, Ozoned unifies all processes into a single ecosystem. The platform can be deployed on-premise or in a private cloud, ensuring full data control, while AI is applied selectively — for example, for inspection and damage assessment.

PRODUCTIVITY TOOLS, DEEPTech, GEN AI

Alchemyst AI

A full-scale infrastructure platform for multi-agent AI systems, including APIs, console, tracing, and enterprise data integration. Unlike narrow modules, it addresses the core LLM challenge of “amnesia” and excessive tokens by providing agents with memory and fast access to relevant information. The platform reduces costs by 40%, accelerates AI performance up to 20x, and shortens development cycles from 6 months to just 1–2 weeks. Already adopted in production by over 5,000 developers and major clients — including Flipkart, Hyundai, Toyota, and Kotak Mahindra Bank — across e-commerce, automotive, banking, and IT services.

CREATIVETech, GEN AI, RETAIL Tech

Tazmic AI

Fashion-tech startup based in Bangalore and Qatar that helps designers and brands explore local markets and create products tailored to specific regions. The platform combines AI-driven trend analytics, automated design generation, and direct integration with manufacturing, including sustainability metrics such as carbon footprint analysis. The system reduces the development cycle from weeks to hours and can be applied not only in fashion but also in adjacent industries like furniture.

India

Infloso AI

MARTECH, GEN AI, PRODUCTIVITY TOOLS

Infloso AI

Autonomous AI agent that fully manages a brand's digital marketing: it launches and optimizes ad campaigns, selects influencers, tests creatives, and adjusts strategy in real time. The system self-trains on the company's entire digital footprint—finance, video, social media, and e-commerce—and operates 24/7 without human intervention. The solution reduces marketing costs by up to 70%, boosts conversion rates, and manages presence across 15+ platforms through a single interface.

BIOTECH, CONSTRUCTION TECH, CLIMATE TECH

Микокарст

A BioTech startup that has developed a patented technology for self-restoration of natural stone facades and monuments using fungal spores. The mycelium-based compound repairs cracks and chips by converting CO₂ into calcium carbonate (limestone). Unlike traditional mixtures, the technology works from within the stone, ensuring durability for up to 20 years without reapplication.

CYBERSECURITY, DEEPTech, PRIVACY TECH

Guardora

A platform for private machine learning on encrypted data that combines federated learning (multiple organizations training a shared model without exchanging raw data), homomorphic encryption (models operating directly on encrypted data), and differential privacy (extra protection against data leakage). The solution enables banks, insurers, and telecom operators to train and retrain models without sharing original data, while maintaining high accuracy.

Russia

guardora.ru

ROBOTICS, URBAN TECH, DEEPTech

Автономика

Intelligent utility robots with modular architecture and quick-change attachments—a versatile solution for urban infrastructure. 36 machines already operate year-round in Moscow's parks, withstanding extreme temperatures from -25°C to $+35^{\circ}\text{C}$. The platform flexibly switches between manual, semi-automatic, and autonomous modes, complemented by powerful software for remote control and analytics.

avtonomika.msk.ru

CyberCodeReview
PROTECT YOUR CODE

CYBERSECURITY, DEVTOOLS, SAAS

CyberCodeReview

Platform for centralized application security management that consolidates results from various vulnerability scanners. Automatically eliminates duplicates and false positives (reducing them by 60–70%), prioritizes risks, and integrates with CI/CD pipelines and task management systems. Supports Russian and open-source scanners, processes 1+ million vulnerabilities, and reduces analysis time by 40% through intelligent data correlation.

Russia

cybercodereview.ru

HEALTHTECH, MEDTECH, DEEPTech

Еyezor

Mobile system for early diagnosis of eye diseases and other conditions detectable through fundus examination - such as stroke indicators, diabetes, and more - powered by AI. Detects up to 85% of glaucoma cases at early stages through mobile screening (enabling testing before symptoms appear) and reduces examination time by 3x. Operates in field conditions, does not require highly qualified physicians, and integrates with telemedicine platforms.

Russia

zortech.ru

SPACETech, TELECOM, DEEPTech

Геофотоника

Startup is developing a next-generation satellite communication system that enables direct internet signal reception on devices without additional equipment, while cutting power consumption in half—a critical advantage for mass connectivity access.

Russia

EMIIA.AI

DEEPTech, IOT, GEN AI

EMIIA.AI SIP

Cloud-based DeepTech platform that combines AI and IoT for sensor data processing. Reduces data volume by 80%, sensor count by 30%, and total costs by 60%. Distributes computing between the cloud and edge devices to accelerate response times. Operates as a service, already deployed in industrial settings, and is suitable for manufacturing and construction.

Russia

emiia.ai

cyberphysics

INDUSTRIAL TECH, DEEPTech, GEN AI

Сайберфизикс

Industrial AI platform for predictive analytics that monitors equipment condition and prevents failures. The system integrates various neural network models and LLMs to automatically detect defects, build failure databases, and provide engineers with precise, actionable guidance complete with references to documentation.

Russia

cyberphysics.xyz

ENERGY TECH, COMPUTER VISION, DEEPTech

Vira Kavir

AI solution for monitoring solar power plants. The solution is capable of performing comprehensive RGB analysis (visual-digital imagery) and thermal analysis of data collected via drones, detecting panel defects and overheating issues.

Iran

virakavir.com

CBC

HEALTHTECH, MEDTECH, DEEPTech

XpressCBC

Portable AI-powered blood analyzer that performs a 5-parameter complete blood count (leukocytes, erythrocytes, platelets) from a finger-prick drop of blood in 5 minutes with 95% accuracy. The device combines microfluidic chips with nanoscale wells, Fourier phase microscopy, and neural network algorithms trained on millions of cell images—delivering lab-grade results without the need for laboratory infrastructure.

India

CYBERSECURITY, DEEPTech, GEN AI

Peris AI

Modular AI platform for security operations centers that automates routine tasks, reducing detection and response time by 30% and costs by 48%. Includes EDR, NDR, XDR, and SOAR components that can be deployed in the cloud, on-premises, or in compliance with data sovereignty requirements. The solution can be implemented as an integrated suite or as individual modules tailored to specific needs.

Indonesia

EDTECH, GEN AI, SAAS

Evolve

A corporate learning AI platform that automatically builds courses from any documents, videos or presentations and adapts them to each user. The system does more than generate content: it identifies knowledge gaps through assignments and tests and assembles a personalised next learning block – a level of personalisation competitors do not offer. Courses can be integrated into existing LMS.

Russia

evolveapp.org

INSURTECH, HEALTHTECH, GEN AI

Wellx

A digital health super-app for corporate clients, integrated with their medical insurance. Today a conventional policy only kicks in once illness or injury has already occurred. WellX shifts the model to a preventive one: employees get telemedicine, mental coaching, integration with wearables (Apple, Garmin, WHOOP) and cashback points for healthy habits that can be spent in the marketplace. For corporates and insurers the platform is available as a white-label solution that launches digital health & insurance products in just 2–3 months. Built-in AI agents automate claims and payout processing, cutting costs and speeding up service.
